Experiment 10: Audit Planning and Issue/Findings Management

Objective

To plan and run internal control audits in Eramba, capture audit outcomes, and manage the issues or findings raised during the audit process.

Sub-Goals

- Schedule and set up internal control audits.
- Define the audit methodology and the criteria for a successful outcome.
- Assign audit owners and evidence owners.
- Record audit results and conclusions.
- Log and manage issues/findings arising from the audit.
- Track the status of each identified issue.

Steps Followed

1. Signed in to the Eramba GRC platform.
2. Opened Control Catalog, then Internal Controls, then Audits.
3. Created/imported audit records for the relevant internal controls.
4. Defined the Audit Methodology for each control — for example, reviewing MFA configuration, enrollment records, authentication settings, and exception logs.
5. Defined the Audit Success Criteria — for example, confirming MFA is enabled and configured per security requirements.
6. Assigned an Audit Owner and an Audit Evidence Owner.
7. Entered the planned start date along with the actual audit dates.
8. Carried out/reviewed the audit against the defined methodology and criteria.
9. Recorded the Audit Result as Passed for controls that satisfied the criteria.
10. Documented the Audit Conclusion, describing the outcome and the supporting evidence.
11. Opened Control Catalog, then Internal Controls, then Issues.
12. Created/imported issues or findings tied to the audited controls.
13. Recorded a description, responsible owner, status, and relevant dates for each issue.
14. Set the finding status to Open wherever corrective action was still pending.
15. Reviewed the audit and issue registers to confirm results and findings were logged correctly.

Sample Audit Record — Multi-Factor Authentication

- Audit Methodology: Review MFA configuration, enrollment records, authentication settings, and exception records.
- Audit Success Criteria: MFA is enabled for applicable accounts and configured according to security requirements.
- Audit Result: Passed
- Audit Conclusion: MFA configuration and supporting evidence satisfy the audit criteria.
- Planned Start / Start / End Date: 2026-08-27

Outcome

The experiment showed how Eramba supports the full audit lifecycle — planning, execution, documentation, and issue management. Audit evidence and outcomes were captured against internal controls, and the resulting findings (such as the noted gap in MFA evidence) were tracked separately in the issues register until resolved.
