Experiment 6: Risk Treatment and Risk Acceptance

Objective

To handle identified business risks in Eramba by setting up a suitable treatment plan and recording any related risk exceptions.

Steps Followed

1. Signed in to the Eramba dashboard.
2. Opened Risk Management and then Business Risks.
3. Selected the Business Interruption risk.
4. Reviewed the risk assessment in the Analysis section, including Likelihood, Impact, and the computed Risk Score.
5. Opened the Treatment tab for the risk.
6. Set the treatment approach to Accept and linked relevant internal controls — Endpoint Protection, Backup and Recovery, and Firewall Management.
7. Linked the Information Security Policy to the treatment record.
8. Saved the treatment configuration.
9. Opened Risk Management and then Risk Exceptions.
10. Created/imported exception records with description, requester, contact, expiry date, and status.
11. Confirmed the exceptions appeared correctly in the Risk Exceptions register.

Outcome

The Business Interruption risk carried a Medium Likelihood, Very High Impact, and a Risk Score of 6. Its treatment was linked to the relevant controls and the Information Security Policy, and ten risk exceptions were created and confirmed in the Risk Exceptions register.
